ADVISORY GROUP

MAKING THE WORLD A SAFER PLACE

We will help protect your employees and minimize costly delays associated with unexploded ordnance (UXO) encounters.

Stage 1 Assess

Commission an explosive hazard survey prior to bidding on your project to better inform your decision on the scope of work if explosive remnants of war are discovered prior to committing resources.

Stage 2 Train

Protect your equipment operators and employees with ordnance recognition and explosive safety training before they travel to the job site. Minimize downtime by knowing what is, and what is not unexploded ordnance.

Stage 3 Respond

Retain an on-call EOD team to rapidly address potential explosive hazards and minimize downtime. Emergency services may take hours to arrive. An on-call private EOD team focused on your site will allow for minimal disruption of work.

Stage 4 Recycle

Allow us to dispose of or recycle any explosive remnants of war encountered on the job site. Explosives can be repurposed and the metal from bombs recycled.
